

WebSpecs™.NET Specification Database

An Optional Feature of WinAlign® Alignment Software

Hunter Online

Use Your Hunter Aligner or Front-Office Computer to Get New Vehicle Specifications Via the Internet...

WebSpecs™.NET* Specification Database

This feature provides the newest vehicle specifications, Adjustment Illustrations and optional Digital Photos from an Internet-connected Hunter aligner or any Internet-connected computer in the shop. There is no need to wait for yearly vehicle specification database updates. The newest vehicle specifications are available on WebSpecs.NET soon after release by the OEMs.

Access WebSpecs.NET from front-office computers

Shops can download specification updates from a front-office computer and transfer them to an aligner. *It is not necessary for the aligner to be connected to the Internet.* Adjustment Illustrations and optional Digital Photo updates can also be accessed for information, training or to explain needed service.

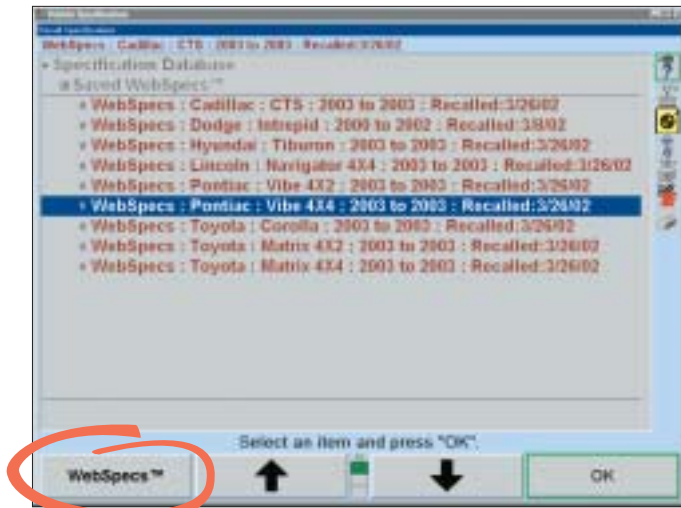

Download specification updates using an aligner

For Hunter aligners that are connected to the Internet, the technician simply clicks the WebSpecs softkey in WinAlign® Software and the aligner does the rest. The aligner automatically connects to Hunter's Web site, downloads the specifications and accesses Adjustment and Inspection Illustrations and optional Digital Photos needed to complete the job.

*Patented feature

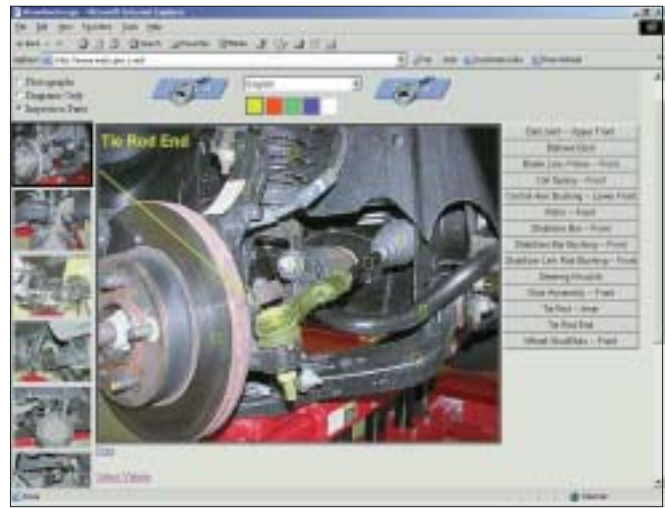

HUNTER
Engineering Company

Update Aligner Specification Database

To retrieve new vehicle specifications the technician simply clicks the WebSpecs™ softkey when setting up the alignment. When the download is complete, WinAlign® automatically stores the updates for later use.

View Illustrations and Digital Photos

Front-office staff can also view and print Adjustment and Inspection Illustrations and optional Digital Photo updates, with descriptions and color coding, using any Internet-connected computer.

WebSpecs™.NET Ordering Information

To order WebSpecs.NET or for more information about Hunter Online products, contact your local Hunter Sales Representative or visit www.hunter.com.

WebSpecs[†] – for new orders

(Part Number: 20-1642-1) – Provides 2 years of WebSpecs for a new factory-shipped console.

WebSpecs[†] – for existing consoles

(Part Number: 20-1699-1) – Upgrades the current (valid) Factory Spec key to a WebSpecs key, which authorizes WebSpecs and Factory Specs. Retains spec year version from currently installed spec key.

[†] The WebSpecs feature is available in WinAlign® Software version 5.1 or greater. The specification download from a remote PC is only available in WinAlign® Software versions 6.1 or greater. The WebSpecs feature requires an Internet-capable Hunter aligner and an Internet service provider (ISP).

Because of continuing technological advancements, specifications, models and options are subject to change without notice.
